ViDock 2 Now Available from Village Tronic

New Product Turns Midrange Laptops into Gaming PCs Without Affecting Mobility

Taipei, Taiwan (June 3, 2009) COMPUTEX 2009 – Village Tronic, a worldwide leader in graphics upgrade solutions for laptop PCs, today announced that ViDock 2 is now available. ViDock 2 is a high performance docking station that allows the user to add desktop graphics power to any ExpressCard® equipped laptop PC without losing mobile features.

ViDock 2 will change the mobile gaming experience by fixing the top 3 complaints: lack of upgradability, falling short of desktop graphics performance, and short battery life.

Upgradability: The desktop graphics card housed in a ViDock 2 can be replaced by the user in minutes allowing the end user to keep pace with the rapid increase in video card performance.

Performance: When used with one of today's midrange laptops, ViDock 2 can improve 3D performance by over 700%. Extended Display support of DVI, HDMI and VGU, up to 2560 x 1600 pixels (30 inch Displays). 3D Mark 2006 scores can reach over 8000 Marks on modern laptops, independent on what graphics chip is built in.

Mobility: Just eject the ExpressCard connector cable from your laptop and you are ready to take your small, light mobile PC to the classroom, the internet café, or anywhere else that you need to work or socialize. All this while maintaining your laptop PC's long battery life.

ViDock 2 takes advantage of ExpressCard 2.0, which is based on the advanced serial I/O technologies, PCI Express® and USB. Release 2.0, supports PCI Express 2.0 at transfer rates up to 5Gbps, two times faster than its previous release. ViDock 2 is the first ExpressCard product to ship that supports these higher transfer rates.

- Village Tronic will be demonstrating ViDock 2 during Computex 2009 at Nangang Exhibition Hall booth N204.

Village Tronic is seeking distributors and sales representatives to bring this exciting new product into the market. Those interested can contact: Hubert Chen, +86.139.2605.2766, 09.8170.4097 (for Computex only), computex2009@villagetronic.com.

Enjoy the highest level of graphics performance at your workstation while you continue to enjoy the mobility of your laptop while away - all with one computer! Just eject the ExpressCard connector cable from your laptop and you are ready to take your small, light mobile PC to the classroom, the internet café, or anywhere else that you need to work or socialize. All this while maintaining your laptop PC's long battery life.

About Village Tronic

Village Tronic (www.villagetronic.com) is an industry leader in graphics upgrade solutions for laptop PCs. Founded in 1993, Village Tronic has been supplying the industry with products such as VTBook for the Windows, Macintosh & Linux platforms. Village Tronic today offers multi-display and gaming solutions on the most advanced expansion buses, like ExpressCard, CardBus and USB.
