

VTBook: Up to 6 displays on 1 notebook

CeBIT 2004.03.20, Hannover – Village Tronic shows worlds smallest solution to extend Desktop on up to 6 independent Displays.

For the first time Village Tronic/HIS present at CeBIT two accessories that are unleashing all the power of VTBook: VTBook DualDisplay and VTBook Overdrive.

VTBook DualDisplay allows to connect two displays to one VTBook card. With just one VTBook and the VTBook DualDisplay option, users can enjoy up to **four displays** with a Notebook. Two on VTBook, one on built in external video output of the notebook, one on the notebook internal panel.

VTBook Overdrive allows to insert a second VTBook card into a Notebook with two CardBus Slots and it supplies more power by an external power supply. Using two VTBooks, users can scale up to a **total of six displays**.

VTBook DualDisplay and VTBook Overdrive are specially designed for power users requiring a multi-display workstations at the work place and, at the same time, being able to move and travel with their computer and data. VTBook combines with its new accessories makes all this possible.

Trading workstations & control systems will mostly benefit from a truly portable multi display solution.

"VTBook is not only changing the appearance of Multi Display workstations hence the Notebook is so much smaller and quiet than the Desktop system. More important it is improving the life style, because for the first time it is possible to benefit from Multi Display Workstation and at the same time having the option to be mobile with all your Data in an instant.

We have customers who replaced in trading rooms hundreds of Multi-Diplay Desktops with a Notebook and VTBook, allowing for much smaller space requirements, heat dissipation and noise. The introduction of VTBook DualDisplay and VTBook Overdrive now allows for a scalable solution for as many as 6 Displays with one Notebook", says Hubert Chen, CEO of Village Tronic.

At CeBIT VTBook is shipping as cross platform version with the new drivers Version 1.6 for Windows 2000 & XP. VTBook is a shipping product for Apple Macintosh since Sept. 2003.

VTBook is already a winning product (http://www.villagetronic.com/e_pr_vtbook_review.html) to improve notebook computer user experience by letting to connect additional external high resolution displays, working as Desktop Extensions, both on Windows and Macintosh platforms.

For the List of distributors please check the sales section of our web site.

Any VTBook PCCard sold can be combined with these new accessories. VTBook DualDisplay is expected shipping in April for Windows platform priced EUR 49 + Tax end user. VTBook Overdrive is expected shipping in May for Windows platform priced EUR 59 + Tax end user.
